

OSINT Domain Risk Assessment Report

Domain: media-magnet.com

Assessment Type: Open-Source Intelligence (OSINT)

1. Assessment Objective

The objective of this assessment is to determine whether the domain **media-magnet.com** poses a cybersecurity, fraud, or scam-related risk. The analysis focuses on domain reputation, infrastructure quality, and historical behavior.

2. Tools & Methodology

- 1 VirusTotal – reputation and malware detection analysis
- 2 Passive DNS analysis – historical IP and hosting behavior review
- 3 DNS and SSL inspection – infrastructure trust evaluation

3. Key Findings

3.1 VirusTotal Reputation

The domain recorded **0 detections out of 95 vendors** on VirusTotal. While this indicates no current malware detection, it does not confirm legitimacy or safety, as many scam or newly repurposed domains evade signature-based detection.

3.2 Passive DNS & Hosting History

Historical DNS analysis shows that the domain was previously hosted on multiple IP addresses, some of which were flagged by several security vendors. This pattern suggests infrastructure reuse, possible domain repurposing, or association with suspicious hosting environments.

3.3 Infrastructure Trust Assessment

The domain relies on low-reputation DNS and email infrastructure, including services linked to providers such as **emb666.com**. Such infrastructure is frequently observed in phishing, scam, and short-lived malicious operations.

3.4 Intelligence Dataset Presence

The domain appears in academic passive DNS datasets commonly used for tracking suspicious or malicious infrastructure. This inclusion indicates prior investigative interest and elevated risk indicators.

4. Risk Evaluation Summary

- 1 Current malware detection: Low
- 2 Historical infrastructure risk: High
- 3 Hosting and DNS reputation: Low trust
- 4 Domain stability and usage patterns: Suspicious

- 5 Overall scam and fraud risk: High

5. Conclusion

Despite the absence of current malware detections, the historical hosting behavior, poor infrastructure reputation, and appearance in intelligence datasets strongly indicate that **media-magnet.com** represents a **high-risk and untrustworthy domain**.

6. Recommendation

It is strongly advised that this domain should not be used for financial transactions, user authentication, email communication, or the submission of personal or sensitive information.

7. Analyst Takeaways

- 1 A clean VirusTotal score does not equate to a safe domain
- 2 Passive DNS history is a critical indicator of risk
- 3 SSL certificates validate encryption, not legitimacy
- 4 Infrastructure quality often exposes malicious intent
- 5 Domain history is a strong predictor of scam behavior
